Like many plants and animals which were vital to their survival some tribes used parts of the chokecherry plant in their rituals. A green dye was derived from the leaves, inner bark and immature fruit. A purplish-red dye was derived from the ripe fruit. The Cheyenne used the limbs to make arrow shafts and bows. The Crows used it for tipi stakes

(Le Th omas 1969) and Flora of Tropical East Africa (Verdcourt 1971), or small proportions of African morphology and tectum structure are indicated for every new species, and evolutionary trends are discussed for Isolona. Finally, an overview of Tanza-nian Annonaceae is given, with a species checklist and distributional maps of

### **Description of four new species Monodora and Isolona**

For many years researchers thought all carnivorous plants came from the same ancestor. In fact, carnivory originated independently multiple times. Remarkably similar pitfall traps occur in four distantly related groups: American pitcher plants, tropical pitcher plants, Australian pitcher plants, and American carnivorous bromeliads.
