Human immunodeficiency virus infection and acquired immune deficiency syndrome (HIV/AIDS) is a spectrum of conditions caused by infection with the human immunodeficiency virus (HIV). Following initial infection, a person may not notice any symptoms or may experience a brief period of influenza-like illness. Typically, this is followed by a prolonged period with no symptoms.

Human papillomavirus infection is an infection by human papillomavirus (HPV). Most HPV infections cause no symptoms and resolve spontaneously. In some people, an HPV infection persists and results in warts or precancerous lesions. The precancerous lesions increase the risk of cancer of the cervix, vulva, vagina, penis, anus, mouth, or throat. Nearly all cervical cancer is due to HPV with two ...

A urinary tract infection (UTI) is an infection caused by bacteria in part of the urinary tract. In the lower urinary tract, it is known as a simple cystitis (a bladder infection). In the upper urinary tract, it is known as pyelonephritis (a kidney infection). Symptoms from a lower urinary tract infection include painful peeing and either frequent peeing or wanting to pee (or both).
