3 Organic Nomenclature Mono- is not used to designate a single substituent in systematic nomenclature, but may be used in conversation for emphasis. 4. Where there are two identical substituents at one position, as in 2, numbers are supplied for each, and the prefix, di-, tri-, and so on, is included

ORGANIC NOMENCLATURE - CaltechAUTHORS

As organic chemistry developed and structures became more complex, a systematic method for naming organic compounds became necessary. The International Union of Pure and Applied Chemistry (IUPAC) is the organism that sets the rules for nomenclature of organic compounds today. Names that follow IUPAC rules are known as systematic names, or IUPAC names.

Short Summary of IUPAC Nomenclature of Organic Compounds Introduction The purpose of the IUPAC system of nomenclature is to establish an international standard of naming compounds to facilitate communication. The goal of the system is to give each structure a unique and unambiguous name, and to correlate each name with a unique and unambiguous structure.

Organic Nomenclature

Organic Nomenclature – The Basics There are two compounds having the molecular formula C₄H₁₀, which differ only in the way the atoms are connected to one another. Molecules which have the same molecular formula, but different connectivities among the constituent atoms, are called structural isomers.

Naming Organic Compounds. The increasingly large number of organic compounds identified with each passing day, together with the fact that many of these compounds are isomers of other compounds, requires that a systematic nomenclature system be developed.
