Quantum electrodynamics of strong fields? JOACHIM REINHARDT and WALTER GREINER Institut für Theoretische Physik der Johann Wolfgang Goethe Universität, 6 Frankfurt am Main 1, Robert Mayer Strasse 10, Germany Abstract Quantum electrodynamics of strong external fields is investigated in the context of atomic physics.

Description : Quantum electrodynamics is an essential building block and an integral part of the gauge theory of unified electromagnetic, weak, and strong interactions, the so-called standard model. Its failure or breakdown at some level would have a most profound impact on the theoretical foundations of elementary particle physics as a whole.

Heisenberg was probably the first to recognize that the ground state, the vacuum, could acquire certain properties (quantum numbers) when he devised a theory of ferromagnetism.

6. Quantum Electrodynamics In this section we finally get to quantum electrodynamics (QED), the theory of

light interacting with charged matter. Our path to quantization will be as before: we start with the free theory of the electromagnetic field and see how the quantum theory gives rise to a photon with two polarization states.

In particle physics, quantum electrodynamics (QED) is the relativistic quantum field theory of electrodynamics. In essence, it describes how light and matter interact and is the first theory where full agreement between quantum mechanics and special relativity is achieved.

It can tunnel through the energetically forbidden region of the potential barrier with a certain decay rate (probability per time).

"The particular volume on quantum electrodynamics was first published in 1992, with a second edition in 1994 and now a third one at the end of 2002. I have used the former edition(s) of this particular volume in a course on QED and it is a very good source to find all the details."

In theoretical physics, quantum chromodynamics (QCD) is the theory of the strong interaction between quarks and gluons, the fundamental particles that make up composite hadrons such as the proton, neutron and pion.
