The random Laurent rational functions (2.3) reduce to the partial sums of a standard Laurent series by setting $A_k = 1$ and $B_k = 1$ for all k with probability one. Let $\tilde{\mu}$ be the uniform distribution $d = (2\tilde{\mu})$ on the circle $fz2C : |z|= \tilde{\mu}g$. Theorem 2.3. Suppose that the coefficients of the Laurent rational functions (2.3) satisfy (2.1) and (2.2).

The three will be selected by simple random sampling. The mean for a sample is derived using Formula 3.4. (3.4) where x_i is the number of intravenous injections in each sampled person and n is the number of sampled persons. For example, assume

We will always make probability sampling, because in case we choose the appropriate technique, it assures us that the sample is representative and we can estimate the errors for the sampling. There are different types of probability sampling: Random sampling with and without replacement. Stratified sampling. Cluster sampling.
