nonzero element of A is a unit, then A is called a division ring (also a skew eld.) A commutative division ring is called a eld. Examples: 1) Z is a commutative ring. $U(Z)=\{1, \hat{a}^{-1}g\}$ 2) The group Z/nZ becomes a commutative ring where multiplication is multiplication mod n . $U(Z/nZ)$ consists of all cosets $i+nZ$ where i is relatively prime to n . 3) Let F be a eld, e.g., $F = R$ or C .

1950s module theory has become a most important part of the theory of associative rings with unit. The category $R\text{-MOD}$ of unital modules over a ring R also served as a pattern for the investigation of more general Grothendieck categories which are presented comprehensively in Gabriel's work of 1962 (Bull. Soc. Math. France).

With $a \neq 0$ and D being integral domain, (1) implies $nx = 0$. So we have $nx = 0 \iff x = 0$, showing D is of finite characteristic. 9. If R is a system satisfying all the conditions for a ring with unit element with possible exception of $a + b = b + a$, prove that the axiom $a + b = b + a$ must hold in R and that R is thus a ring. (Hint: Expand $(a+b)(1+1)$ in two ways.)
